Subject: References for the General Management Plan Amendment

Dear Interested Party of the General Management Plan Amendment,

Are you interested in reading *Grazing Plan: Recommendations for Point Reyes National Seashore managed grazing lands* prepared by the Range Ecology Laboratory at the University of California, Berkeley? This document is one of many references that will help inform the General Management Plan (GMP) Amendment and the individual ranch operating agreements for Point Reyes National Seashore and the north district of Golden Gate National Recreation Area. Please respond to this message if you would like to receive a digital copy of this document via email.

Additionally, please see the linked *A Natural Resources Condition Assessment for Point Reyes National Seashore*. The Natural Resources Condition Assessment Program aims to provide documentation about the current conditions of important park natural resources through a spatially explicit, multi-disciplinary synthesis of existing scientific data and knowledge. This document will also inform the GMP Amendment.

We anticipate release of the draft environmental impact statement for the GMP Amendment sometime in late July for a 45-day public review and comment period, including public meetings. For more information on this planning process, please see go.nps.gov/pore/gmpa.
